How to do that? Just install Chrome browser for Mac, open it and then go to web.. Once downloaded, run it and it will take you through the install process Once Bluestacks has installed, perform a search for “WhatsApp” (click on the “search” icon and digit “Whatsapp”).

Yes, after the success of its web version, this popular instant messaging service is ready with WhatsApp Desktop App to help its users to stay in touch with the friends while working on desktops.. However, thanks to the recent release of Whatsapp Web for Chrome, you can (finally) communicate through any computer safely (not only Mac but also any Windows Pc!) with all of your contacts.. Remember: you can also connect your WhatsApp with your Facebook if you want to update your status and share contacts or media (video/photos) with your friends.

Here you can find the full procedure However, to download the specific MAC Os Bluestacks version you must go first to this page.. That should turn up the WhatsApp messenger app: simply click on and install it Once WhatsApp has been installed, you'll need to verify your phone number by entering it where required.. The steady growth in the popularity of this messaging app could also be because of the fact that you are more likely to find a friend, colleague or family member from anywhere in the world on WhatsApp than any other instant messaging service.. The steps below will place your computer into a "clean boot", meaning using a minimal set of drivers and startup programs so that we can determine whether a background program is interfering with the Desktop Background.
